

DOMAIN NAME SERVICE SERVER APPARATUS AND METHOD

ABSTRACT

A DNS server system provides IP addresses for a host in a computer network.

- 5 Upon receiving a request from a client for an IP address associated with a domain name, the requested IP address is retrieved from an object oriented database and transmitted to the client. The DNS server system provides configuration access from a client in a computer network. Communicative coupling is established between a client web browser and a DNS server system web server. A user interface adapted to
- 10 provide configuration access to a DNS server system is requested. The user interface is downloaded from the DNS server system over the computer network.
